

Maintenance Instructions

Do not wash the film for 30 days after the installation. Visual changes during this time period are a natural part of the bonding process.

The patented scratch resistant coating on the window films is extremely durable. With proper care, your windows will look beautiful for many years to come. For best results, clean your windows with a soft cotton cloth or a squeegee with NO metal exposed and **avoid using any abrasive or ammonia cleaners.** We recommend Vinegar or Alcohol based cleaners like "Sprayway", which you can find at Costco, "Long Shot" is sold at Janitorial Supply Companies, or just a small amount of dishwashing Soap & Water with a capful of rubbing Alcohol or Vinegar & Water.

It may take up to 3 to 6 months, depending on the film and the time of year, for it to fully cure. After installation, there may be small water spots and/or hazy appearance. This condition is temporary, caused by the moisture used in applying the film. After this moisture dries, they will diminish and eventually disappear.
